CORE LANGUAGES

- Python (Expert)
- SQL
- C++
- JavaScript / Git

FRAMEWORKS

- LangChain / LangGraph
- CrewAI / LlamaIndex
- PyTorch / TensorFlow
- FastAPI / Docker
- Scikit-Learn / MLflow

DATA SCIENCE

- NumPy / Pandas
- Matplotlib / Seaborn
- Feature Engineering
- Model Evaluation

EDUCATION

University of Gujrat (UOG)
BS Computer Science
Oct 2023 – Present (Expected 2027)

PROFESSIONAL SUMMARY

Analytical and highly driven Computer Science student specializing in Artificial Intelligence, Machine Learning, and Python workflows. Experienced in building end-to-end AI applications, managing semantic text pipelines, orchestrating multi-agent architectures, and setting up automated verification workflows. Adept at transforming business requirements into deployed technical assets using modern generative systems, clean code standards, and robust evaluation processes.

PROFESSIONAL EXPERIENCE

AppEvolve

Jun 2024 - Jun 2026

AI Intern -> Junior AI Engineer | Full-time, On-site

- Developed and deployed LLM-based applications, AI chatbots, multi-agent systems, and agentic workflows using LangChain, LangGraph, CrewAI, and AutoGen in production environments.
- Built RAG pipelines and document Q&A systems using vector databases (FAISS, ChromaDB) and OpenAI API, enabling semantic search over enterprise knowledge bases.
- Trained, fine-tuned, and deployed ML/DL models for classification, regression, and recommendation using PyTorch, TensorFlow, Scikit-learn, and XGBoost.
- Designed FastAPI/Flask REST APIs and AI automation pipelines, integrating models into real-world applications with Docker containerization and Git-based version control.

AI & MACHINE LEARNING PROJECTS

Enterprise Multi-Agent AI Platform

LangGraph, FastAPI, Docker, Qdrant

Designed and built a production-ready multi-agent AI platform with specialized autonomous agents for Operations, Finance, and Customer Service domains using LangGraph orchestration.

- Designed specialized Operations, Finance, and Customer Service agents using LangGraph with role-based orchestration and persistent conversational memory.
- Built a production-ready RAG knowledge base supporting PDF, DOCX, and Excel ingestion with semantic retrieval via Qdrant vector database and source citations.
- Containerized the full platform with Docker, automated CI/CD pipelines using GitHub Actions, and added monitoring, testing suites, and comprehensive documentation.

Document Analysis & RAG Pipeline

LangChain, ChromaDB, OpenAI API

Engineered an enterprise semantic search workspace deploying context-aware chunking and dense proximity lookups across large-scale internal document repositories.

- Parsed over 5,000 unstructured documents cleanly into semantic matching vectors with high retrieval accuracy.
- Reduced hallucination risks by integrating hybrid search frameworks combining keyword and vector search inside ChromaDB.

AI Agent Frameworks & Recommendation Systems

CrewAI, LangGraph, Scikit-Learn

Architected an intelligent multi-agent orchestration grid utilizing interconnected state machines for concurrent analytical execution.

- Designed cyclic self-correction state graphs using LangGraph to continuously evaluate and refine tool outputs.
- Integrated preference data scoring models to surface personalized collaborative recommendations.

CERTIFICATIONS

Generative AI with Large Language Models – DeepLearning.AI
Instruction fine-tuning, prompt optimization, RAG, and vector database deployments.

Generative AI for Software Development – DeepLearning.AI
Agentic workflows, building LLM applications, and production AI coding assistants.

Machine Learning Engineering for Production (MLOps) – DeepLearning.AI
End-to-end MLOps architectures, CI/CD automated deployment, and monitoring.
